NETWORK SECURITY

Security software and hardware are no different than other technology products and typically are easy to purchase and difficult to install, implement, and use effectively.

OnlineSecurity's Network Security Service leverages our extensive expertise in technology and security to assist organizations, of all sizes, to cost effectively install, implement, and effectively use recommended security technology solutions.

Service Description

- ▶ There are typically four phases to successfully delivering a technology security solution.
 - Installation: OnlineSecurity's security engineers will install the software or hardware solution at the client's location.
 - Configuration: OnlineSecurity's security engineers will configure the system to the particular needs of the client.
 - Testing: OnlineSecurity's security engineers will test the system to insure that it is working properly. This may include external and internal penetration testing, social engineering attacks, etc.
 - Training: OnlineSecurity's security engineers will provide training to the client's staff on how to use the security solution.
- ▶ Additionally OnlineSecurity is a licensed VAR for Computer Associate eTrust Suite of Security products and services, and this relationship can be leveraged to deliver security technology solutions to the clients.

Delivery Mechanism

- ▶ OnlineSecurity will meet with the client to determine the scope and goals of the engagement and prepare a proposal and/or work plan accordingly.
- ▶ Typically the majority of the work in the engagement will occur at the client's location and will require that OnlineSecurity have the cooperation from and access to key technical and leadership individuals within the organization.

Deliverables

- ▶ At the end of the engagement OnlineSecurity will provide to the client a detailed network security report encompassing actions taken, security issues discovered, and additional recommendations to secure the organization.

Pricing

- ▶ Quotes for network security projects are based on the specific considerations of the engagement, i.e. location, number of systems, scope of the assessment, etc. and will be priced by time and material required.
- ▶ Depending on the nature of the engagement, network security quotes may include the cost of security hardware and software solutions.
- ▶ Expenses are billed on a 'no- load' pass through basis, and travel time is billed at 1/2 rate.
